Fair Use and Network Management Policy

Document reference TC-POL-002. Issued by TeleCore Communications. This document forms part of the customer agreement and is published in full at telecore.example/policies.

What unlimited means on our network, the point at which speed is reduced, how long a reduction lasts, and how capacity is shared when a cell is busy.

1. Purpose

Plans sold as unlimited carry no hard stop on the amount of data you may use. To keep the network usable for everyone, a fair use threshold applies. Passing it reduces your speed for the rest of the cycle. It never stops your service, never adds a charge, and never triggers a penalty.

2. Fair use thresholds by plan

The threshold counts domestic data only, measured in decimal gigabytes across the billing cycle. Roaming data is excluded and is governed by TC-POL-001.

Plan	Monthly fee	Data allowance	Fair use threshold	Reduced speed
Business Pro	110.00	Unlimited	200 GB	2048 kbps
Unlimited Max	85.00	Unlimited	120 GB	1024 kbps
Unlimited Plus	65.00	Unlimited	80 GB	512 kbps
Flex 50GB	45.00	50 GB	50 GB (hard cap)	256 kbps
Flex 20GB	30.00	20 GB	20 GB (hard cap)	256 kbps
Prepaid Pay-As-You-Go	0.00	Pay as you go	Not applicable	Not applicable

2.1 The reduced speed applies to both download and upload and is a ceiling, not a guarantee. Actual speed also depends on coverage, device and cell load.

2.2 At 512 kbps, messaging, email, maps, music streaming and standard definition video continue to work. High definition video and large downloads will not.

3. What happens when you pass the threshold

- Your speed is reduced to the rate in the table above for the remainder of the billing cycle.
- Full speed is restored automatically at 00:00 local time on the first day of the next billing cycle. You do not need to contact us and nothing needs to be reset.
- No overage charge is raised. Passing a fair use threshold on an unlimited plan never costs money.
- Your service is not suspended, your number is not affected, and voice and SMS are unchanged.
- You may request one courtesy restoration of full speed in any rolling 12-month period. Ask the assistant to raise a service request and the restoration applies from the next full hour.

3.1 Moving to a higher plan mid-cycle lifts a reduction immediately, and the new threshold applies to the data you have already used in that cycle. Moving from Unlimited Plus to Unlimited Max after using 92 GB, for example, restores full speed at once because 92 GB is below the 120 GB threshold of the new plan.

4. Notification

We send an SMS to the subscription when domestic usage reaches 80 percent of the threshold, and again at 100 percent when the reduction begins. Both messages are free and cannot be opted out of, because they are a condition of selling an unlimited plan.

5. Network congestion management

Congestion management is applied per cell, only while that cell is congested, and is lifted the moment it is not. When a cell is congested, traffic is served in this order:

Priority	Traffic class	Treatment
1	Emergency calls and emergency SMS	Never restricted under any condition
2	Voice and real-time communication	Protected ahead of all data
3	Business Pro and Unlimited Max subscriptions	Served ahead of other data
4	Subscriptions within their fair use threshold	Normal treatment
5	Subscriptions past their fair use threshold	Served last while congested

5.1 Congestion management is independent of the fair use threshold. A subscription within its threshold may still be slowed briefly on a busy cell, and that is not a fair use reduction.

6. Tethering and mobile hotspot

Tethering is included at no extra cost on all postpaid plans and draws on the same data as the handset. Tethered data counts towards the fair use threshold in the same way as data used on the device itself. We do not restrict the type of device you connect.

7. Prohibited use

A mobile subscription is sold for personal or business use by the account holder. The following are not permitted and may lead to suspension after written notice:

- Reselling capacity, or operating the SIM as a permanent replacement for a fixed line in a commercial premises.
- Continuous automated traffic that serves no user, such as running a public server or traffic-generation software.
- Use in a SIM bank, gateway or similar device that terminates third party traffic.
- Any use that is unlawful or that materially degrades service for other customers.

7.1 Suspension for prohibited use requires 10 days written notice and a chance to correct the behaviour, except where the traffic is unlawful or is actively damaging the network.

8. Capped plans

Flex 50GB and Flex 20GB carry a hard cap rather than a fair use threshold. When the cap is reached, data stops and a message is sent. You may add a top-up of 5 GB for 10.00 USD, as many times as you wish in a cycle. Top-up data expires at the end of the cycle in which it was bought. Voice and SMS are unaffected by a data cap.

9. Definitions

- Fair use threshold -- the domestic data volume in a cycle beyond which speed is reduced.
- Throttling -- the speed reduction applied after the threshold is passed.
- Congestion -- the state of a cell whose demand exceeds the capacity available to it.
- Domestic data -- data used on our own network inside your home country.
