SIM Swap and Account Security Policy

Document reference TC-POL-003. Issued by TeleCore Communications. This document forms part of the customer agreement and is published in full at telecore.example/policies.

How we verify that a request to move your number to a new SIM really came from you, the delay we hold before it takes effect, and the controls that protect an account during and after a swap.

1. Purpose

A SIM swap moves your number to a new SIM. It is a routine request when a handset is lost or a SIM is damaged, and it is also the single most valuable step for someone attempting to take over your accounts elsewhere, because so many services send a one-time passcode by SMS. This policy is deliberately slower and stricter than convenience alone would suggest.

2. Who may request a swap

- The registered account holder.
- A named authorised contact recorded on a business account.
- A holder of a registered power of attorney, on production of the original document.

A swap cannot be requested by a user of a line who is not the account holder, even where that user has physical possession of the handset.

3. Verification tiers

Every request is verified at one of two tiers. The tier is decided by the risk score in section 4, not by the customer's preference.

Tier	Where	Evidence required
TIER1	In a retail store, in person	Government photo identification matching the registered account name, plus the account holder present
TIER2	Remote, through the assistant or care line	A one-time passcode delivered to the currently registered number, plus any two of: last four digits of the registered payment card, the amount of the most recent payment, three numbers called in the last seven days, the account creation month

3.1 A one-time passcode is never read back to an agent and is never sent to the new SIM. Any caller who asks you to share a passcode is not acting for us.

3.2 Where the registered number cannot receive a passcode because the SIM is lost or stolen, the request must be verified at TIER1.

4. Risk scoring

Each request is scored from 0 to 100. Indicators are cumulative and the score is capped at 100.

Indicator	Points
Account password or registered email changed in the last 7 days	+20
Registered address changed in the last 30 days	+25
A previous SIM swap on this account in the last 30 days	+30

Indicator	Points
Request originates outside the account's registered region	+15
Account holds a stored payment method or a balance above 500.00 USD	+10
Reason given is LOST or STOLEN without a police reference	+10
Two or more failed verification attempts in the last 24 hours	+20

4.1 Bands

Score	Outcome
0 to 39	Proceed at TIER2. The request may be completed remotely.
40 to 69	TIER1 required. The account holder must attend a store in person.
70 and above	Held for MANUAL_REVIEW by the fraud team. No swap is performed until a human reviewer releases it, and the reviewer will attempt to contact the account holder on a previously registered channel.

4.2 We do not disclose the score or the individual indicators to the caller, because doing so would tell an attacker which signal to remove. The assistant may say that a request needs further verification, and nothing more.

5. Cooling-off period

5.1 Every approved swap is held for 24 hours before the new SIM is activated. The period runs from the moment verification completes.

5.2 During the cooling-off period:

- The existing SIM stays fully active for voice, SMS and data.
- An outbound port of the number to another operator is blocked.
- A notification is sent to the registered number, the registered email address, and by push to any signed-in app session.
- The account holder can cancel the swap from any of those notifications with a single action, at no charge and with no questions asked.

5.3 The cooling-off period is waived only for a TIER1 in-store swap where the SIM is confirmed damaged and the handset and photo identification are both presented.

6. Porting lock after a swap

For 72 hours after a swap completes, the number cannot be ported to another operator and a further swap cannot be requested. This window exists because a swap followed quickly by a port is the classic pattern of an account takeover.

7. Lost and stolen handsets

Report a lost or stolen handset immediately and we will bar the SIM at once, before any verification, because barring a line can only ever protect the account holder. Restoring service afterwards still requires full verification under section 3. Charges raised after the time of the report are not your responsibility. Where a police reference is supplied within 14 days, the replacement SIM fee is waived.

8. Fees

Situation	Fee
Replacement SIM, standard	10.00 USD
Lost or stolen with a police reference supplied within 14 days	Waived
Damaged SIM within 12 months of activation	Waived
VIP and Business segment accounts	Waived
eSIM re-provision to a new device	Free, unlimited

9. Request lifecycle

A swap request moves through the following states, and the assistant will tell you which one your request is in.

State	Meaning
PENDING_VERIFICATION	Logged, waiting for the evidence in section 3
COOLING_OFF	Verified, inside the 24-hour hold in section 5
APPROVED	Hold elapsed, the new SIM is ready to be activated
MANUAL_REVIEW	Risk score 70 or above, held for the fraud team
COMPLETED	The new SIM is live and the old SIM is deactivated
REJECTED	Verification failed or the request was cancelled

10. Reporting suspected fraud

If you receive a swap notification you did not request, treat it as an attack in progress. Cancel it using the link in the notification, then call us on the fraud line. We will place a security hold on the account, which blocks swaps and ports entirely until you attend a store. Contact your bank as well, because a swap attempt usually means your details are already known to someone.
